Problems to be
Resolved in the
Language Development Program

1. Is it intended to have and & or conditions against a position?
Against a unit?

(and)
Example: French with German, or Spanish

2. To what level of organization would language unit requirements
be placed?

~~DIRECTORATE,~~ OFFICE, DIVISION, etc.

3. Is it assumed that if there is a general language requirement
against a unit, there can also be a specific requirement against
a position(s) within the unit.

4. Would there be a problem if a mechanical comparison is not made
to the "factor(s)" level of man-proficiency versus language
requirement?

Example:

		R	W	S
REQM	French	N	H	H
EMPLOYEE	French	I	H	H

5. What is the anticipated maximum number of individual languages making up the requirement for a given language unit?

6. It is assumed that language factors of R (Read), W (Write), and S (Speak) are sufficient for reporting purposes. Is this assumption correct?

7. Are man records listed against requirements for:

   A. DISCLAIMED
   B. Greater than 3 years since last test
   C. Self-evaluated

   Example:

		R	W	S	
REQM:	French	H	I	H	
MAN :	French	4	3	5	
MAN :	French	P	J	K	* (Disclaim)
MAN :	French	N	I	H	# (>3 YRS)

8. The mechanical system is incapable of working in "general" language groupings. (I.E., Chinese - with no dialect specified.) (NOTE: There are 21 various dialects in the Chinese language)

   Is this a problem?

9. Is there a maximum number of language requirements that one individual can satisfy?
